

TRITON DIGITAL'S
**STREAMING
METRICS
MONTHLY
RANKER**

March 2025

About Triton's Streaming Metrics Services

Triton's Streaming Metrics measurement service is the industry standard for online audio consumption data. It provides credible data that enables audio publishers around the world to analyze the consumption of their audio content by daypart, device type, geography, distribution platform, and more.

About Triton's Rankers

Triton's Rankers are a listing of the top performing digital audio publishers and sales networks, as measured by Triton's Streaming Metrics measurement services.

Publishers are ranked Globally, as well as in three distinct regions: US, LATAM, and EMEA.

- The Global Publisher Ranker, powered by Streaming Metrics, verifies the quantity of streams without qualifying where they are being consumed.
 - The regional rankers quantify consumption based on listener location.
 - All metrics within Triton's Rankers include both ad-supported and non-ad supported listening.
 - Sales Networks include both owned streams and the streams related to network affiliations.
-

About the Rankings

Rankings are computed based on Average Active Sessions (AAS), with Session Starts (SS), and Average Time Spent Listening (ATSL) also displayed.

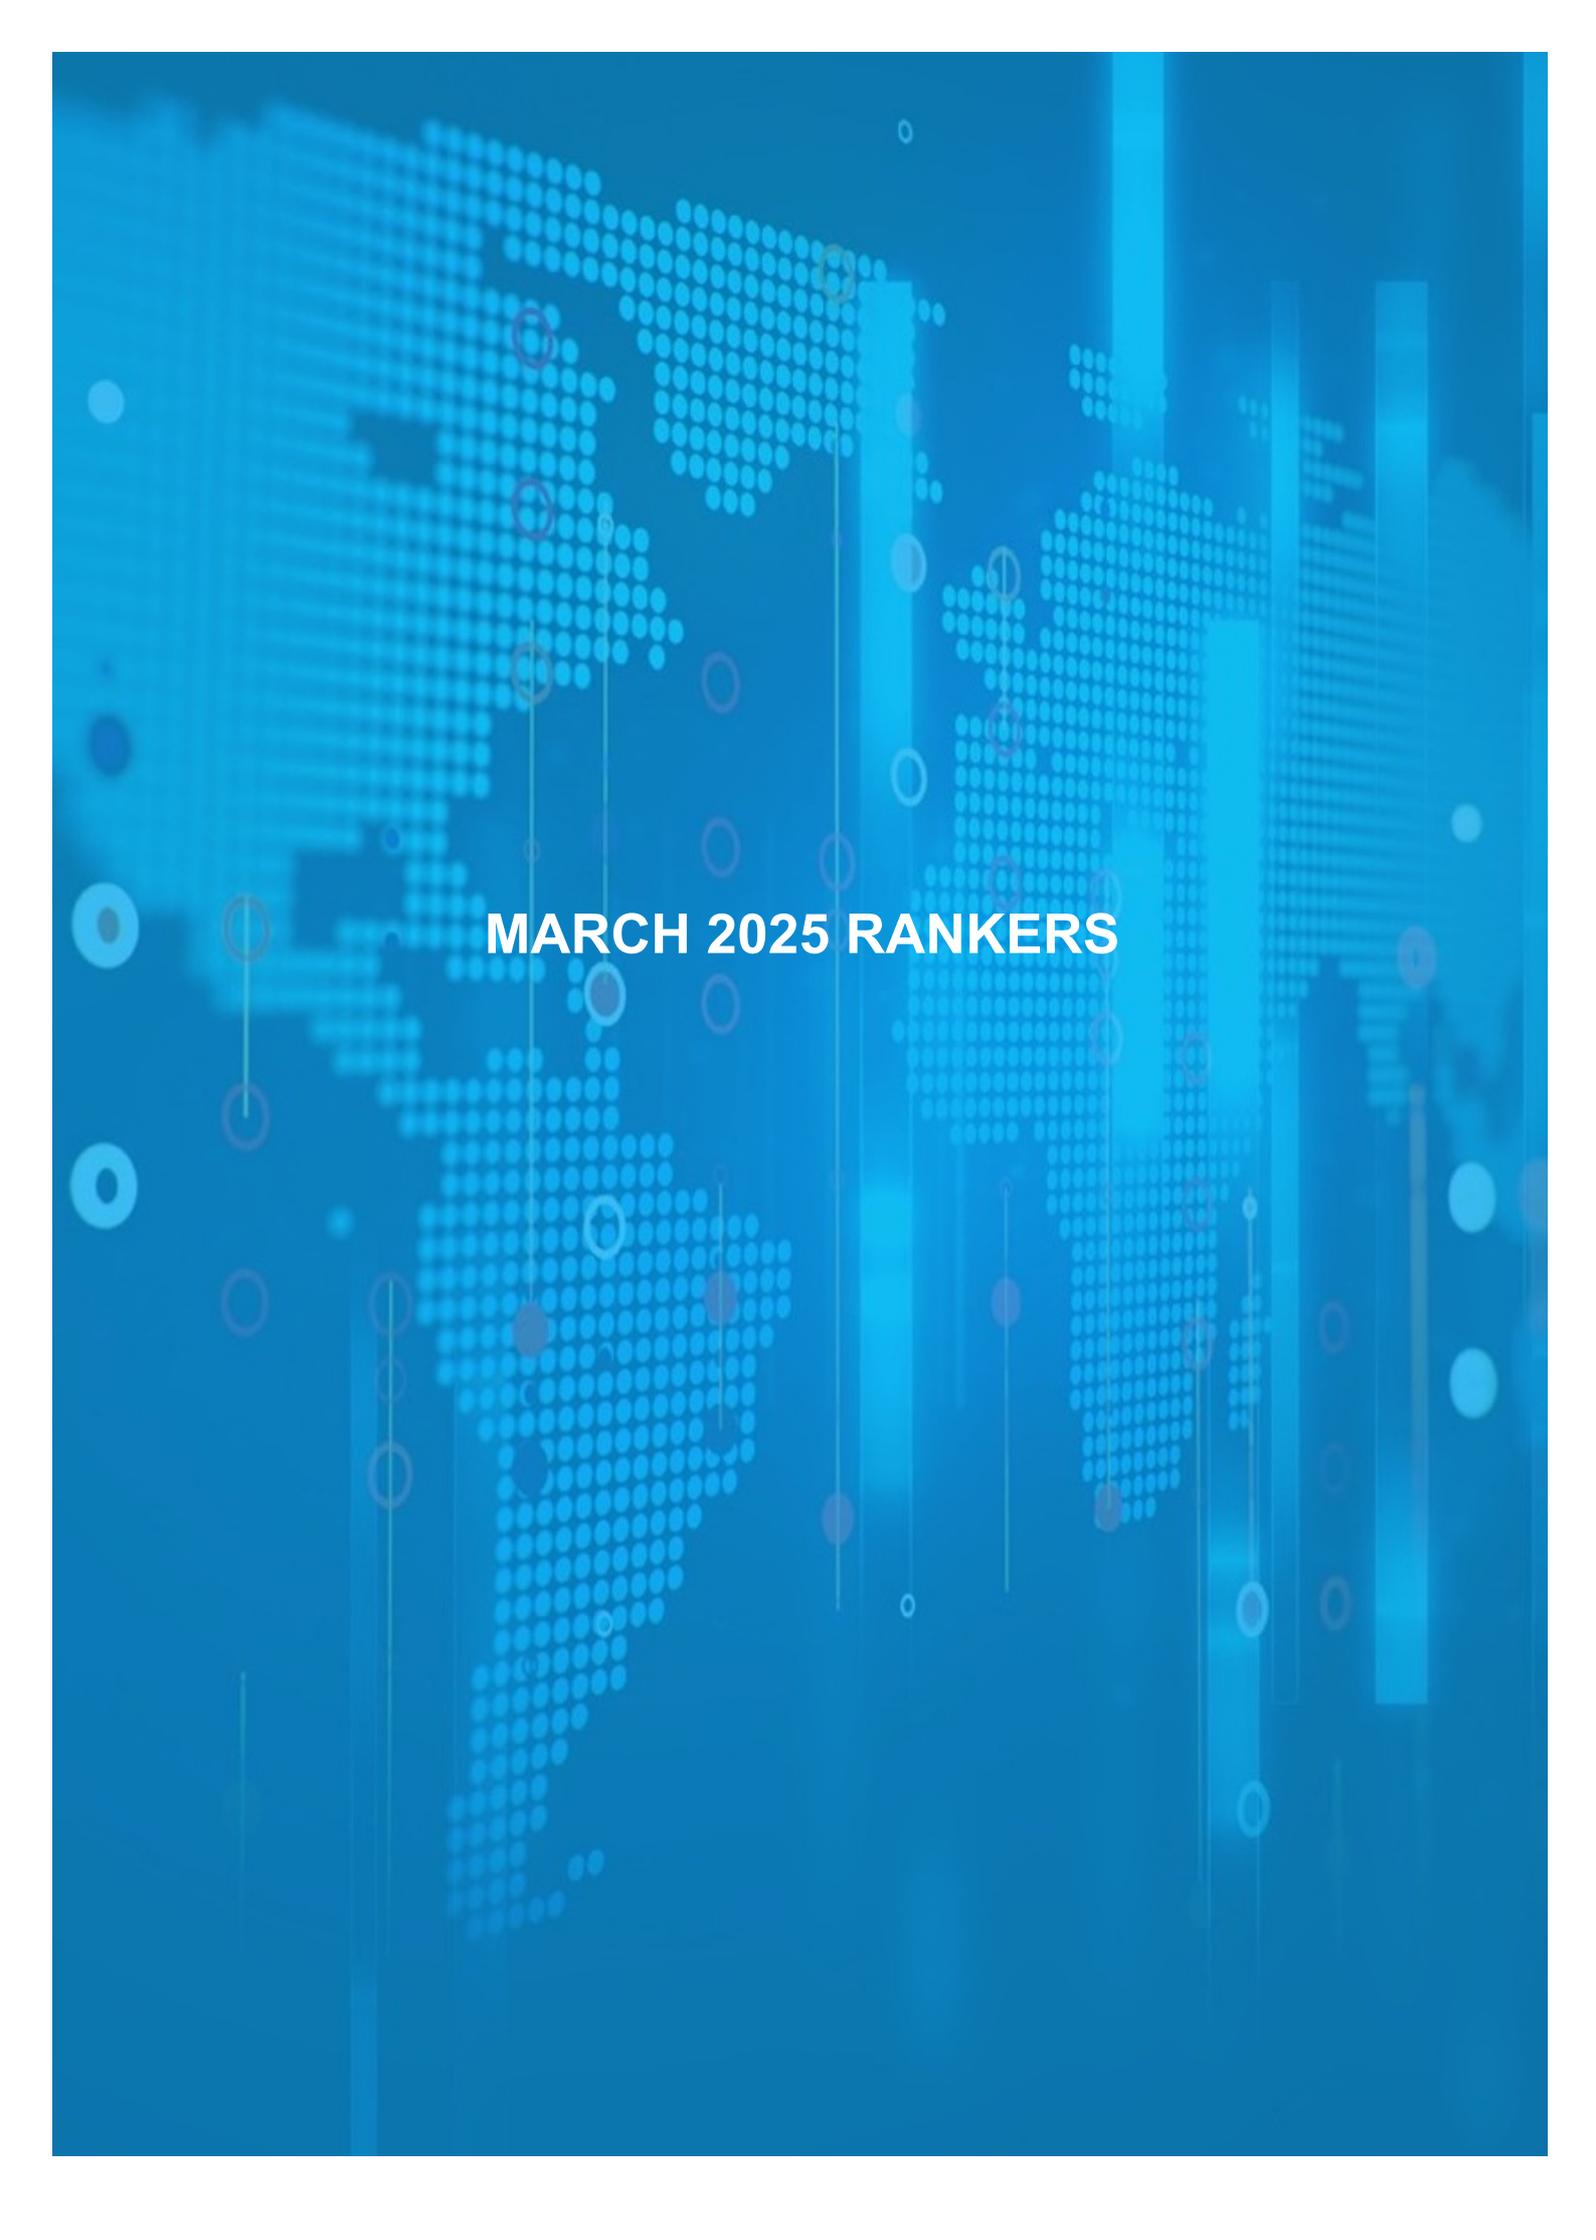

Understanding the Metrics

Average Active Sessions or **AAS** represents the average number of sessions at any point in time in the reported time period, with invalid sessions omitted. AAS can be calculated by dividing Total Listening Hours by the number of hours within the reported time period ($AAS = TLH / \text{Hours in period}$).

Total Listening Hours or **TLH** is defined as the total number of hours that the station/publisher has streamed during sessions with a duration of at least one minute in length within the reported time period. Any/all invalid sessions are omitted.

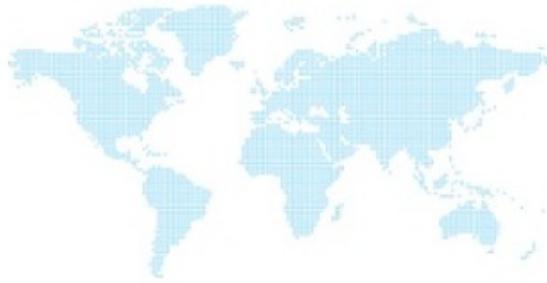

Session Starts or **SS** is defined as the number of sessions with a minimum duration of one minute in length that were started within the reported time period. Any/all invalid sessions are omitted.

Average Time Spent Listening or **ATSL** is defined as the average number of hours for each session with a duration of at least one minute in total within the reported time period. Calculated as total time spent listening divided by active sessions.
